My Experience

Senior Software Engineer @ Capgemini

Sep 2018 - present

▶ **Project**   **Corporate PDF reporting service for investment bank in US**

Web application for generation of compliance reports in PDF format. Reports contained information on compliance with corporate digitalization standards for various bank departments.

My contribution

Implemented the high-end pixel-perfect UI design of the report content which was shared across 5 corporate domains with **more than 400 departments/sub-departments** and used in digitalization cost planning involving **dozens of millions of dollars**.

Technologies: Svelte, NodeJS, JavaScript ES6, SCSS

▶ **Project**   **Corporate hyperlink scanning service for investment bank in US**

Web application for lookup and testing of hyperlinks on corporal website and internal web applications.

My contribution

Lead a team of 3 developers which **built and shipped the service from scratch**. Collected and analysed requirements by contacting users directly on regular basis. Desinged UI/UX of the Web app. Implemented the app in full-stack fashion with 70%-30% frontend-backend distribution. Service was used by central publishing department of the bank involving **more than 50 content editors** and allowed to find **more than 300 invalid links** on bank's production website.

Technologies: ReactJS, NodeJS, TypeScript, SCSS

Frontend Developer @ Anixe

Jun 2017 - Sep 2018

▶ **Project**   **Hotel Extranet**

Web application that allows travel agents to upload their partner hotels or suppliers and give them access to the online booking system so that the partners can put their hotel's description and information about room availability, rates, special deals, and restrictions.

My contribution

Implemented core functionality of the UI which allowed to **launch the application live**. The application gives access to **thousands of hotels** for **more than 100 users**.

Technologies: Angular, TypeScript, ES6, SCSS

Junior Web Developer @ Selerant

Nov 2015 - May 2016

▶ **Project**   **DevEx**

Formula-based product lifecycle management (PLM) software pertains to manufacturers in process industries such as food and beverage, flavor and fragrances, personal care and specialty chemicals companies.

My contribution

Added minor changes to backend and frontend.

Technologies: JavaScript, jQuery, C# .NET 4.5, Oracle DB
